Efficiency® The Art of Living Well

Efficiency is Crevin's easy care brand that guarantees clean and untroubled living and working spaces.

Viruses and bacteria are eliminated from an Efficiency fabric using a simple water-soap solution. The protection is safe and frequent cleaning will not damage the fabric.

Thanks to its easy clean properties, soils and stains can be easily removed from an Efficiency fabric. For a thorough periodical cleaning, Efficiency fabrics can be safely machine-washed at 30° C*.

** For machine-wash instructions refer to Crevin's Care & Clean guide.*

Why cleaning with soap?

The virus that causes COVID-19 is a so-called enveloped virus with an oily membrane. By using soap this membrane is destroyed and as a result the virus disintegrates.

Why is soap so important?

Water alone may rinse off dirt, but viruses and bacteria need the intervention of soap to effectively destroy the oils and fats that protect them.

How to remove stains?

Blot the stain with absorbent paper. Spray with a water-soap solution and rub with a clean towel. Repeat as many times as necessary. After the stain has disappeared rinse with clear water and rub dry.
