

### Water and alcohol

Alcohol dissolved in water, in a concentration of 75% alcohol and 25% water, is very effective against microbes in our upholstery. The upholstery can only be disinfected with alcohol in the case of fixed covers. Machine-washing with alcohol is not permitted.

#### Fixed covers

1. Before cleaning with alcohol and water, remove dust and dirt with the vacuum cleaner.
2. Prepare a 3:1 alcohol-water solution (3 parts of alcohol and one part of water).
3. Lightly spray the surface of the fabric at 20/30 cm without rubbing the solution into the upholstery (only when necessary, wipe gently with a clean cloth).
4. Let the alcohol work during 15 minutes and rub dry with a clean cloth.

**Notice: do not excessively or repeatedly use the cleaning solution with alcohol. Frequent cleaning with alcohol may damage the fabric.**

### 1. Dry wash

In the event that an upholstery fabric, as indicated by its technical specifications, cannot be washed at home, or if a more rigorous cleaning is required, there is the option of professional cleaning with solvents like tetrachloroethylene. Dry cleaning can only be carried out by authorized professional cleaners.

***Attention: not all fabrics can be dry-cleaned with solvents, consult our fabric chart on page 6/7.***
