

Water and alcohol

Alcohol dissolved in water, in a concentration of 75% alcohol and 25% water, is very effective against microbes in our upholstery. The upholstery can only be disinfected with alcohol in the case of fixed covers. Machine-washing with alcohol is not permitted.

Fixed covers

1. Before cleaning with alcohol and water, remove dust and dirt with the vacuum cleaner.
2. Prepare a 3:1 alcohol-water solution (3 parts of alcohol and one part of water).
3. Lightly spray the surface of the fabric at 20/30 cm without rubbing the solution into the upholstery (only when necessary, wipe gently with a clean cloth).
4. Let the alcohol work during 15 minutes and rub dry with a clean cloth.

Notice: do not excessively or repeatedly use the cleaning solution with alcohol. Frequent cleaning with alcohol may damage the fabric.

1. Dry wash

In the event that an upholstery fabric, as indicated by its technical specifications, cannot be washed at home, or if a more rigorous cleaning is required, there is the option of professional cleaning with solvents like tetrachloroethylene. Dry cleaning can only be carried out by authorized professional cleaners.

Attention: not all fabrics can be dry-cleaned with solvents, consult our fabric chart on page 6/7.

2. Wet cleaning

In the event that an upholstery fabric, as indicated by its technical specifications, cannot be washed at home, or if a more rigorous cleaning is required, there is the option of professional cleaning with biodegradable detergents, that in comparison with dry clean solvents have a lesser environmental impact.

Attention: not all fabrics can be wet-cleaned, consult our fabric chart on page 6/7.
